

Migrating from Novell GroupWise to Oracle Beehive

Overview and Frequently Asked Questions

Overview

The Oracle Beehive collaboration platform provides a unified set of communication and collaboration services including enterprise messaging, team collaboration and synchronous collaboration. By migrating existing employees to Oracle Beehive enterprise messaging, you can standardize on a single architecture that allows you to centrally manage, securely audit, and globally apply compliance rules across an integrated set of communication and collaboration services, from email to team workspaces to conferencing.

Migrating data between messaging systems is a more complicated process than a simple upgrade, but Oracle Beehive comes with a Beehive Migration Tool (BMT) that helps make migrating easier. The Oracle BMT supports migrating from Novell GroupWise version 6.x.

Oracle Beehive Migration Process

The migration process can be done in a phased approach or be completed all at once. A phased approach can involve both the moving of user groups and the moving data in various stages. The Oracle BMT is designed to easily customize the process to meet your needs, including support for lists describing how accounts and data will be migrated and the ability to delimit email and calendar data migration by date.

Oracle Beehive Migration Tool Components

Address Book Migration

The migration process for address books (also referred to as contact lists) will migrate all personal contacts and personal groups and their members. Any attachments including photos associated with the address book will not be migrated.

Calendar Migration

The BMT migrates appointments, meetings, day events, and resource bookings, all filtered by date ranges. The following calendar data is not migrated: holidays, journals, reminders, personal annotations, contacts links, “show time as” values, “would prefer another time” flag, web conference information, and categories.

Email Migration

Email data migration moves mail data from Novell GroupWise servers to Oracle Beehive. Specific date filters can be used to limit the amount of data being migrated. The migration tool will preserve message flags and folder structures. The BMT supports migration via a ‘pre’ and ‘full’ migration stage. In the ‘pre’ migration stage, the messages are migrated without any association content. The ‘full’ migration stage includes all associations so, for example, messages are associated to folders. There are some limitations to what is migrated, including categories and certain user level flags on mail messages.

Task Migration

The BMT task migration component can be configured to migrate active as well as uncompleted tasks. It also supports the migration of assigned tasks.

Migrating from Novell GroupWise to Oracle Beehive Overview and Frequently Asked Questions

Frequently Asked Questions

What are the migration options?

It is recommended that you engage with Oracle Support to determine which migration option is best for your organization. There are currently two common migration options for Novell GroupWise.

- **Migrate to Oracle Beehive On Demand:** Oracle Beehive On Demand is available as a managed service where you purchase the Beehive licenses but Oracle experts manage the application on-site, at Oracle's data center, or at a partner's site. Another option is an Oracle Beehive On Demand subscription. This Software as a Service (SaaS) option bundles the license, support, hosting and software management in one predictable monthly fee that avoids large up front capital expenses.
- **Assisted Migration using a Partner:** A qualified partner can help manage the data migration process to ensure it goes smoothly for your users. Different partners are available to help with both developing the migration plan as well as managing the actual data migration.
