

# Oracle Health Validation Program

Connecting validated medical devices to your EHR is an important step toward medical device interoperability. Organizations that close this gap can decrease manual data transcription errors and workflow inefficiencies. To help organizations address the gap between medical devices and EHRs, the Oracle Health CareAware Platform connects medical devices to any EHR platform.

## Workflow-driven architecture

The CareAware Platform is a workflow-driven, open architecture designed adapt to industry standards as they are updated, or new standards are created. The platform’s driver framework and nomenclature service enable connections to new devices and adherence to new standards to be developed quickly. The platform is independent of EHRs, offering the ability to connect a validated medical device to an EHR, regardless of vendor.

Available workflows and solutions include:

- Oracle Health Bedside Medical Device Integration
- Oracle Health Event Management
- Oracle Health Infusion Suite
- Oracle Health Laboratory Medical Device Integration
- Oracle Health Mobile Vitals Collection
- Capacity management
- Remote device connectivity
- Smart pump programming
- FetaLink

## Validated device partners

By partnering with medical device manufacturers through the Oracle Health Validation Program, Oracle supports medical device integration with the CareAware Platform device connectivity architecture. With nearly 50 validated device partners and more than 1,000 supported and validated devices that help enhance and simplify organizations’ health care experiences, Oracle works with customers and partners to continually evolve the device portfolio.

Workflows available through Oracle Health CareAware Platform include
