Oracle Cloud @ Deutsche Bank

Dr. Marcus Praetzas, July 2021, Deutsche Bank AG

1. Introduction

- Deutsche Bank
- Use Cases and Exadata Experience

2. Cloud Journey

- Scope & Strategy
- Proof of Concept
- Comparison

3. Oracle Exadata Cloud @ Customer

- Announcement
- Summary and next steps

- Founded 1870 in Berlin
- Picture: Frankfurt Branch by Roßmarkt 18 around 1930.
- Internationalisation 1955 – 1988
- Global from 1989 – now
- 1989: Acquisition of the British merchant bank Morgan Grenfell
- 1999: acquisition of Bankers Trust
- 2006: acquisition Berliner Bank, Norisbank
- 2010: acquisition Postbank, SalOp.
- 2017: #PositiveImpact
- 2018: Initial Public Offering of DWS
- 2020: 150 years

Oracle Exadata Experience – in use and increasing since 2010

Stable, resilient, performant and cost efficient operation of the Oracle database estate

20+ (critical) Applications

- Risk & Capital Planning, Regulatory Reporting, Compliance, Tax, Payment Processing, Financial Messaging,

Features

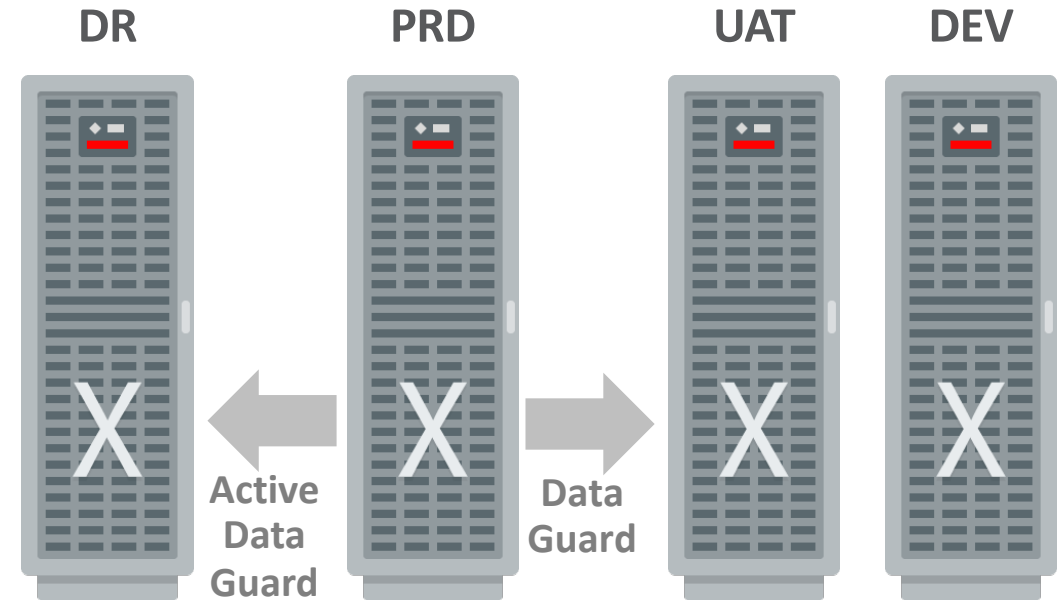

- RAC, In Memory, Multitenant, Active Data Guard

Global Deployment

- 48% Germany, 43% UK, 9% US
- All versions from Exadata X2 to X8

Experience

- Started in 2010
- Initial Focus on performance
- Proven stability ever since

> 65 Exadata Systems and > 37 PB of Data

Exadata ... Cloud Journey

Scope & Strategy

Analyze current landscape and identify candidates and use cases – (end 2019)

Database Hosting Service Oracle – 5 Platforms + Standalone

- **V1** Database Hosting Service, VM based, own implementation dating back from 2014. Traditional setup (HP-server, EMC storage, VM-Ware), Global deployment
- **V2** similar to V1 but different infrastructure
- **2 x eGrid** IBM hosted database service (mostly retail). RAC based.
- **Exadata**, Mostly critical systems for performance / stability considerations
- Standalone

Full Scope would include > 12k database instances (DEV-TEST-PRD)

DHS-O v1
#databases 2.113
Ora 11.2 **100%**
OEL 5.11 **98%**, OEL 5.8 **2%**
G6 **1%**, G7 **22%**, G8 **77%**

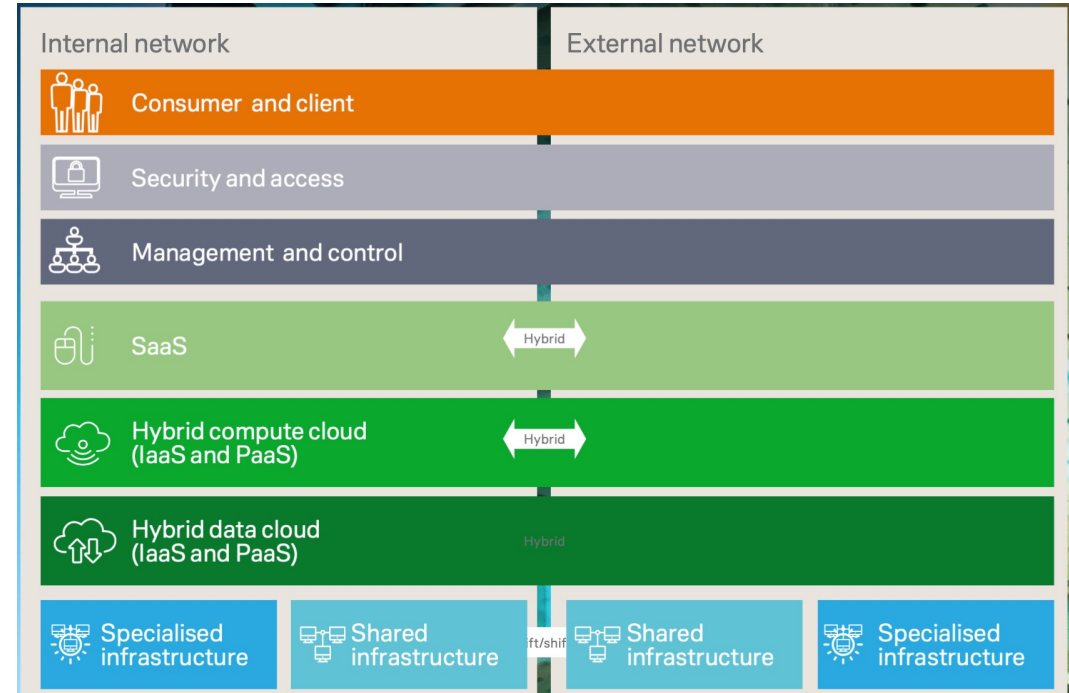

DHS-O v2
#databases 3.095
Ora 11.2 **29%**, 12.1 **70%**, 19.5 **1%**
RHEL 6.x **81%**, RHEL 7.x **19%**
G8 **7%**, G9 **74%**, G10 **19%**

eGrid (IBM)
#databases 649

OEL 6.x **100%**

Hybrid Cloud Strategy

PoC Exadata Cloud Service + Autonomous Database

Proof of Value of the solution (mid 2020)

- Working with Oracle to connected Oracle Public Cloud Datacenter over a 6 month period.
- Executed 40+ test cases to review functional and none- functional requirements jointly with support from Oracle

Exadata Cloud Services Results

- ✓ Exadata Cloud Service delivers equivalent level performance, availability and recoverability to Exadata On Premise

Significant additional advantages to Exadata On Premise

- ✓ Much Easier Setup, Manageability
- ✓ Much Easier Patching
- ✓ Dynamic CPU Scaling
- ✓ Comes with Encryption using TDE and with Standard Audit functionality

Autonomous Database Results

- ✓ Easier setup than Exadata On Premise: less optionality to customize
- ✓ Zero configuration required
- ✓ Operational tasks performed by Oracle: Monitoring, Patching, Backup, Upgrade, Tuning
- ✓ Usual Oracle Database tools are available
- ✓ Latest Release Automated features included
- ✓ Performance equivalent to Exadata Cloud Service

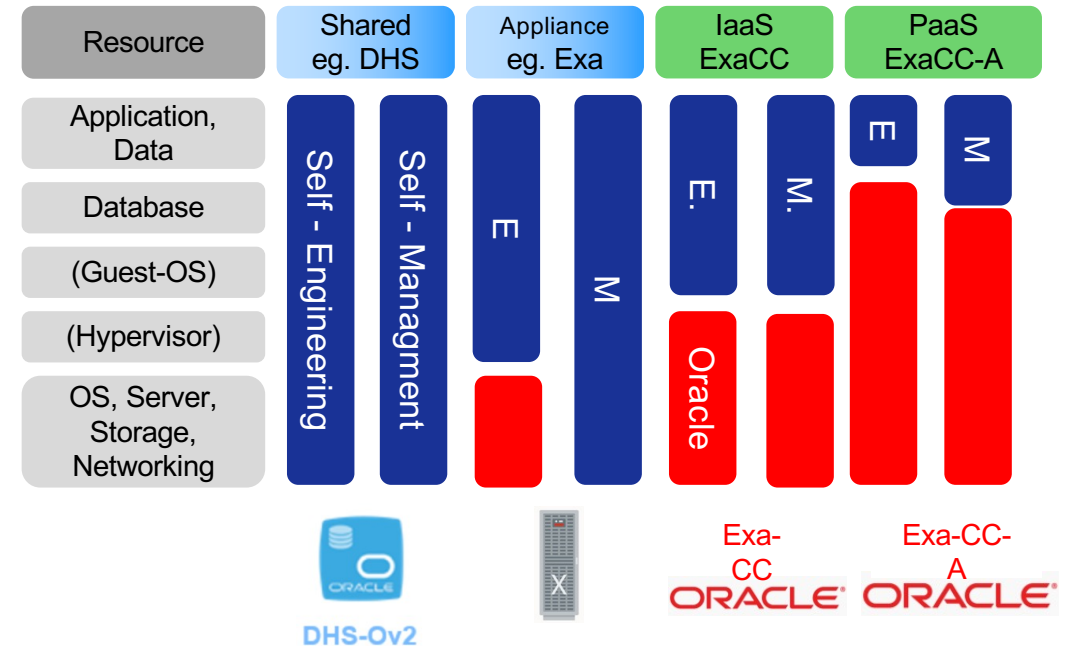

In summary, given the current operational effort, specifically the autonomous database can provide a significant benefit.

Comparison – Recommendation – Negotiation

Comparison and recommending Oracle Cloud@Customer – start end 2020

- Platform**
 - Consumption - Flexibility and Speed
 - Evergreen – Match Regulatory requirement
 - Standardization – Improve Stability
 - Automation – Improved Customer Experience
 - Time to Market – Improved Business Flexibility
- Integration**
 - SDLC CI/CD support
 - Stability, Performance proven platform
 - Maintainability tenant isolation (VM,CDB/PDB)
 - Backup Cyber resiliency & Large DB restore, Backup solution with Oracle is engineered
 - Reduced complexity of Target Op Model by engineered platform solution
 - Speed of Path to Production, current Database Engineering team familiar with Exa

Oracle Cloud@Customer (Exa-CC): Exadata X8M Infrastructure. Managed up to HyperV by Oracle Elastic resource utilization. Hosting in any DC.

Oracle Cloud@Customer Autonomous (Exa-CC-A): Same as EXA-CC but database (automated) operation by Oracle and enhanced automation for elastic resource utilization.

Oracle Exadata Cloud@Customer

Deutsche Bank – Oracle – Announcement – 24. June 2021

Press Release

Deutsche Bank Partners with Oracle to Accelerate Technology Modernization

Deutsche Bank selects Oracle Exadata Cloud@Customer to consolidate key databases in its selected data centers

Companies form innovation partnership to modernize Deutsche Bank's mission-critical databases and enable new financial products and services

Frankfurt, Germany and Austin, Texas—June 24, 2021

Oracle and Deutsche Bank, one of the world's largest financial services organizations, today announced a multi-year collaboration to modernize the bank's database technology and accelerate its digital transformation.

The agreement will see Deutsche Bank upgrade its existing database systems and migrate the bulk of its Oracle Database estate to Oracle Exadata Cloud@Customer, an on-premises deployment option of the Oracle Exadata Cloud Service, to support applications that either will not move to the public cloud or may in the future. This will provide a dedicated platform to support and scale the bank's existing mission-critical systems and services including trading, payments processing, risk and capital planning, and regulatory reporting.

Media Release | June 24, 2021

Deutsche Bank Partners with Oracle to Accelerate Technology Modernization

— Deutsche Bank selects Oracle Exadata Cloud@Customer to consolidate key databases in its selected data centers

★ 0 Rating(s)

1w

Today, we took another significant and exciting step on our digital transformation journey by partnering with **Oracle** to simplify and modernise our database technology. So what does this mean? First and foremost, it means the databases we keep on premises will benefit from cloud technology – and have the option of running that data in future cloud co-location sites. It means we will reduce the number of Oracle platforms in the bank from 5 to just 1. We will save significant costs and support our sustainability efforts by consuming much less energy in our data centres.

A big thank you and congratulations to **Gordon Mackechnie, Gil Perez, Marcus Praetzas, Harsh Gupta, Jens Bernhardt, Stephan Pick, Shivani Shakir, Alistair Charleton** and the rest of the team who made this contribution to our technology journey.

Summary & Next Steps

- Benefit** — Cost: Triple digit million euro cost save over a number of years
-  — Simplification: Consolidating from 5 Oracle platforms to 1
- Modernisation: Move to a platform that is “evergreen” (updates more regularly)
- Supports our sustainability efforts as we will reduce energy consumption in our data centres
- Oracle’s Exadata Cloud@Customer service can run in Deutsche Bank’s current data centres as well as in future cloud co-location data centres
- Low transformation risk with Oracle as technology owner
- Furthermore, we will enter into an innovation collaboration with Oracle to ensure we maximise the insights from our on premises databases

- Next**
- 
- Execution, Execution, and Execution – 12 FRE in 2021
- Development System in July 2021 in Germany / UK
- UAT Testing Systems in August and September
- Production in October and November
- 2022 – start US and Singapore deployment
- 3-5 year Engagement

Technology Drivers & Challenges

- ✓ **Simplification & Standardisation** of Database & Middleware platforms
- ✓ **“Always-Available”** - Develop and maintain a HA/MAA On-Premises and Cloud Landscape for **Database** and **Application Layer**
- ✓ Increase **availability**, **scalability**, **agility**, **security by design**:
downtime, poor performance is extremely costly
- ✓ **Cloud (Native) First** and Continuous Delivery (**CI/CD**)
- ✓ **Data Centre Optimization** and **Exit** Strategy

Our Use Case

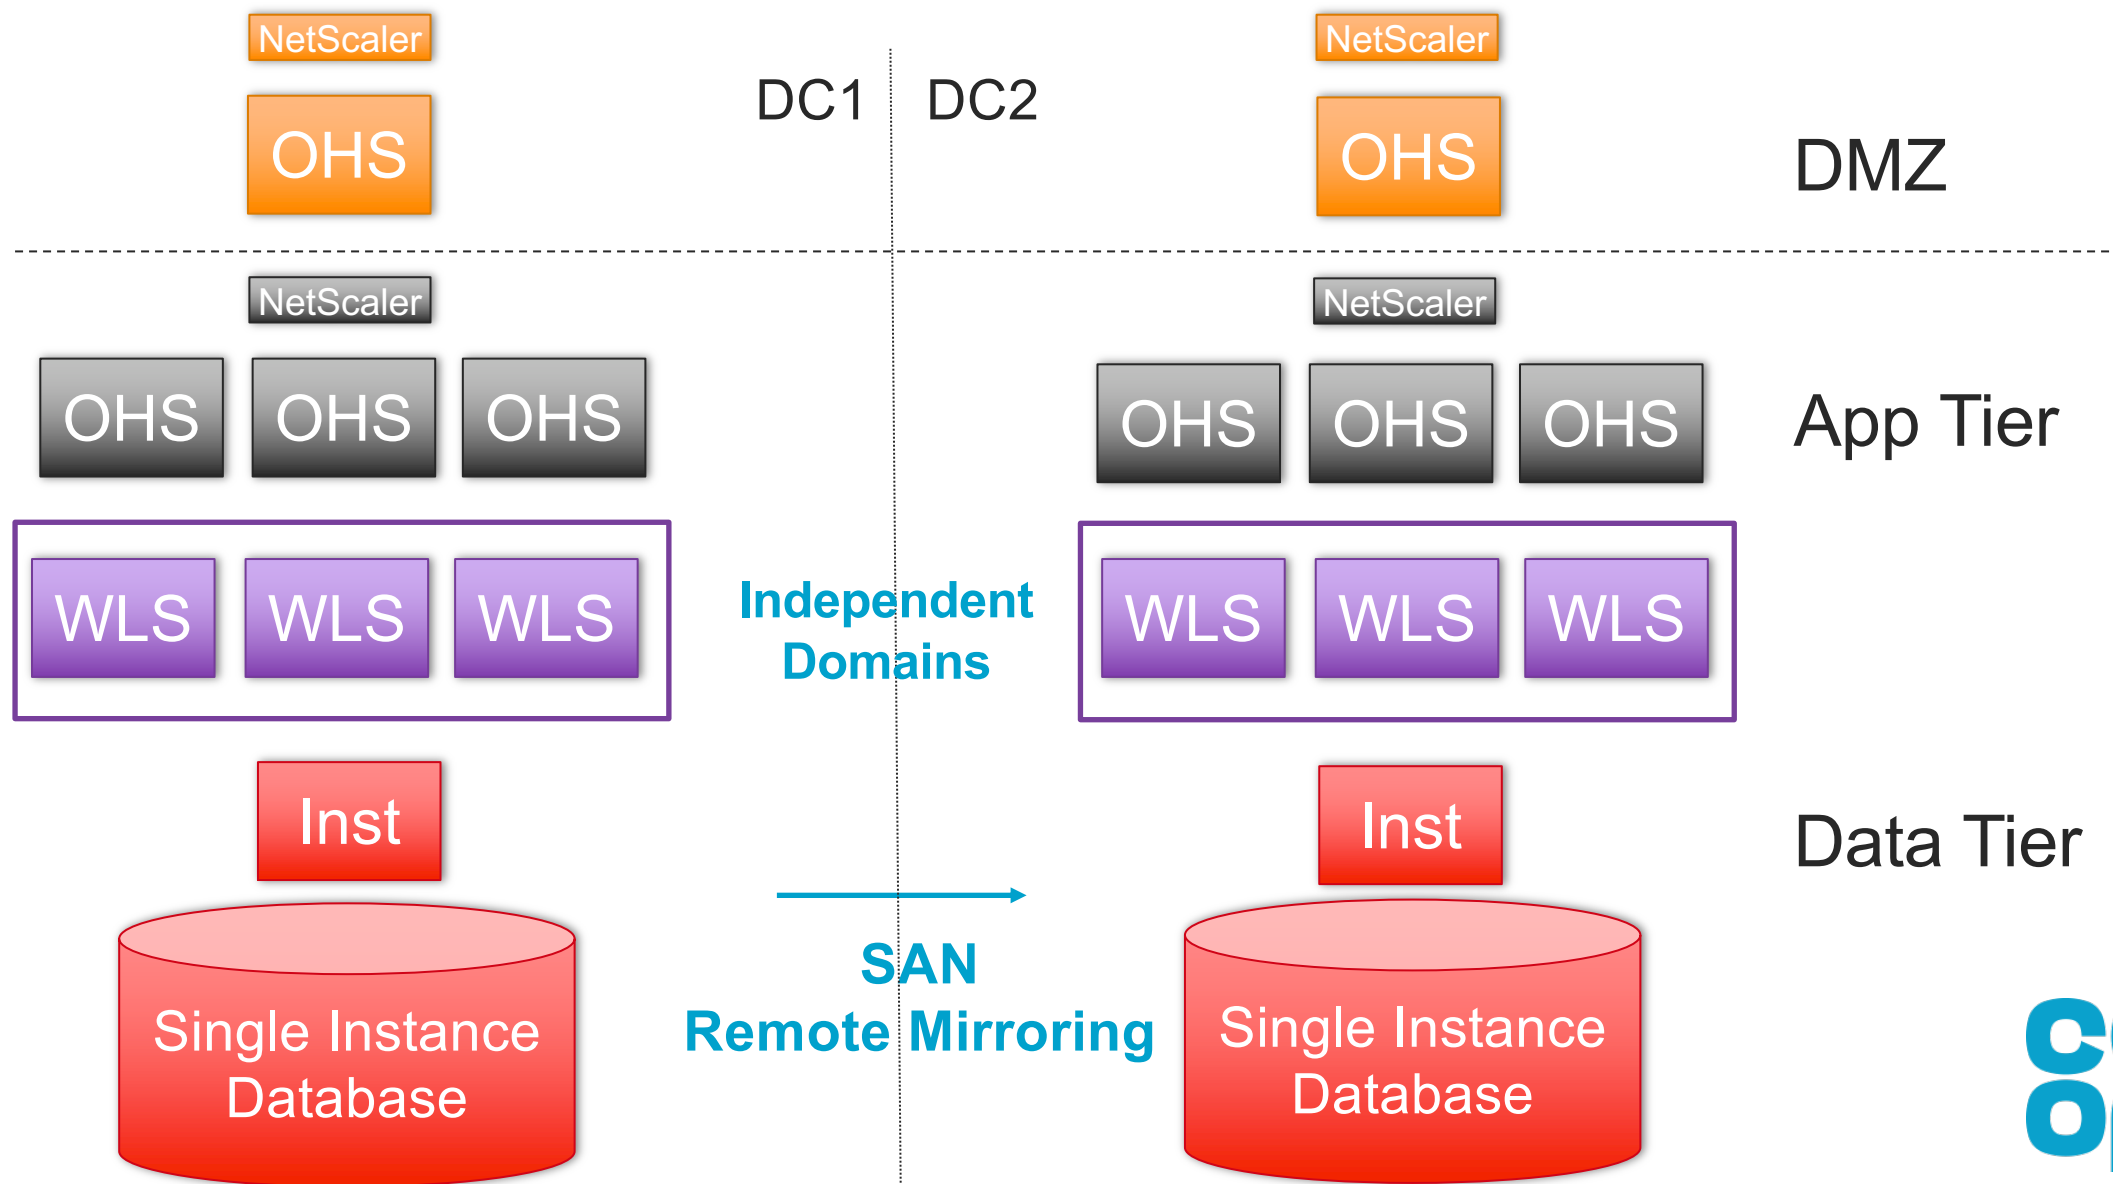

Our Use Case

- **Business-critical** Ordering App used in Franchise stores
- **Java** based Application, **externally facing** (DMZ) and currently running on-premises in Co-op's Data Centres
- **Limited HA** and **DR** to cover loss of one data centre
- Oracle software versions:
 - **Fusion Middleware - Oracle WebLogic & Oracle Web Tier 12c**
 - **Oracle Database 11gR2**

On-Premises Architecture

Challenges & Drivers

- **Data Centre Optimization and Exit** strategy – Application is medium term lifespan app so needs to be migrated to cloud as part of DC exit.
- Current versions (**WLS & OHS 12.1.3**) of Oracle products are **out of support** (Premier ended Dec 2017, **Extended** to **Jan 2022**) so will impact Oracle support cost & potentially ability to maintain service levels.
- **Services include OHS in DMZ**, open to internet, so needs support & patches.
- Mostly reliable but have issues when OS patching DMZ in particular.
- Limited testing capability for DMZ/OHS so every Windows patch application runs risk of outage
- **Limited HA in DMZ web tier layer** and **database layer** so single component failure **risks non-trivial outage**.

Technical Considerations

Provisioning Options for Weblogic

Traditional Install

- Traditional on-prem or **IaaS** – full install with OUI, WLST etc

Weblogic Marketplace

- OCI method, combination of images & configuration via TF (IaC-PaC)

Docker/Kubernetes

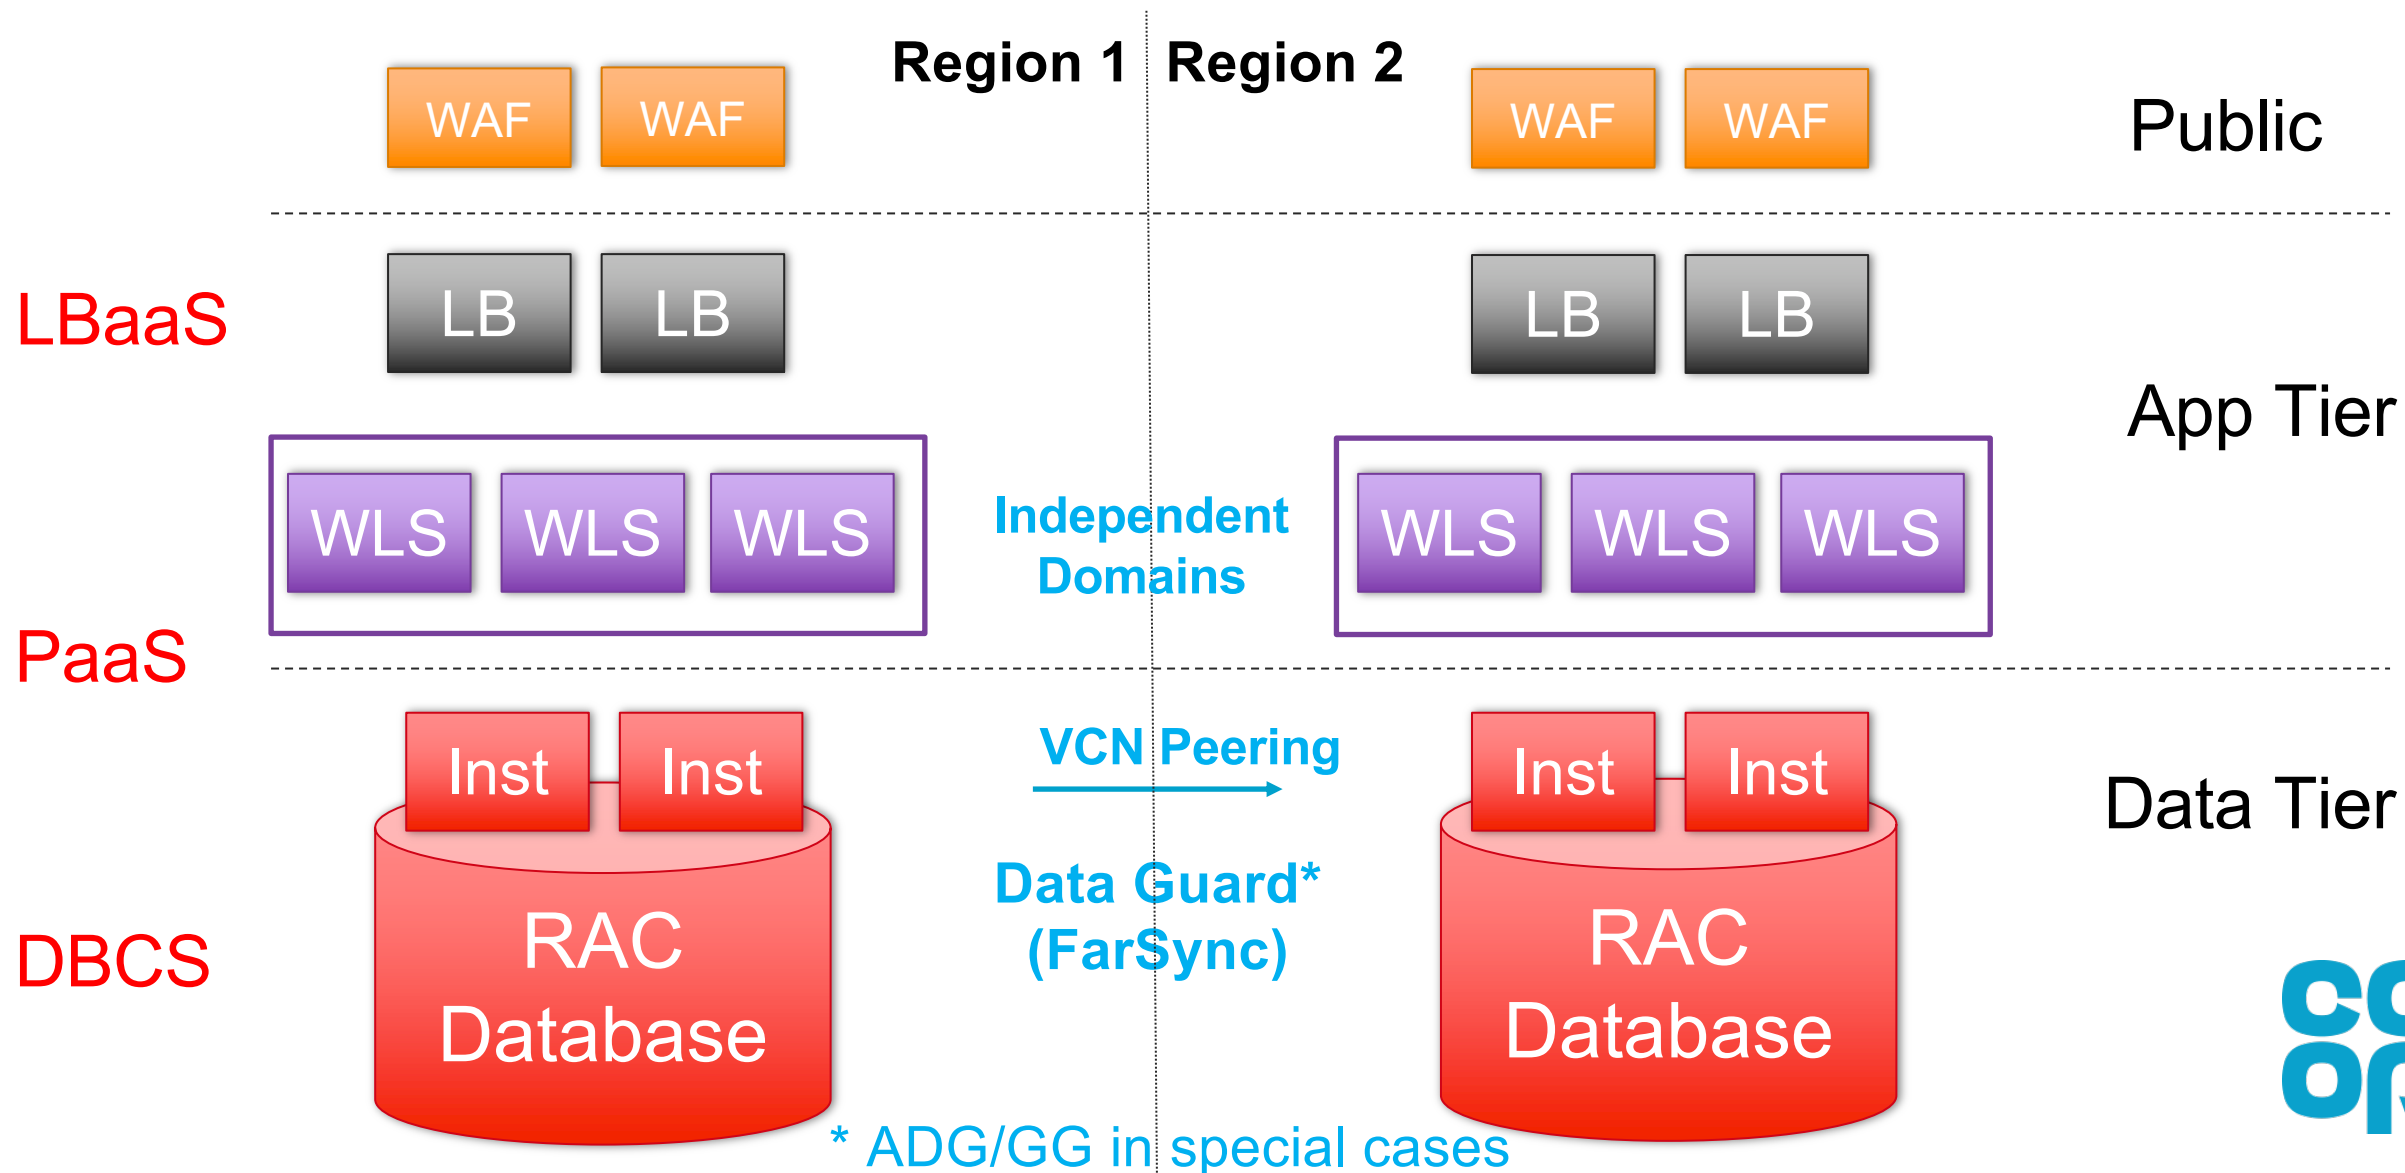

- Modern, layered container approach with multiple provisioning options:
 - “**WebLogic on OKE**” from **OCI Marketplace** 

OKE Online Lab - <https://oracle.github.io/cloudtestdrive/AppDev/wls/ll-wls-for-oke->

[nonjrf/?customTrackingParam=:em:lw:rce:cpo:::RC_WWMK201222P00024:WeblogicEMEAHOLfeb](https://oracle.github.io/cloudtestdrive/AppDev/wls/ll-wls-for-oke-nonjrf/?customTrackingParam=:em:lw:rce:cpo:::RC_WWMK201222P00024:WeblogicEMEAHOLfeb)

MAA in OCI – HA/DR General Approach

MAA in OCI Design Patterns

	Database		Middleware
1	Single instance (1PDB in CDB)	Data Guard {&FSFO}	WLS 1 or 3 nodes 1 domains/site
2 Preferred	RAC (1 PDB in CDB)	Data Guard	WLS/OKE 3 node & Grid Link
3	RAC (1 PDB in CDB)	Active Data Guard	WLS 3 node {AC/TAC}
4 Preferred	RAC (1 PDB in CDB)	Active Data Guard {& GoldenGate}	(non-Oracle)/(T)AC

Implementation Approach

Key Considerations for this Use Case

Stateless

No JMS

No local files

Session state is for authentication/authorisation (internal mechanism)

Plain Java WebApps

No ADF / JRF / OPSS etc

JSP/JSF/JDBC

Traditional database architecture

Files in and out of the system go via tables, PL/SQL, SQL*Loader

Flat file data to/from other systems

Lift and shift => don't yet want to change (external) developer workflow or make code changes to database... one step at a time

WebLogic Suite on OCI Marketplace is an option but we have more apps to migrate so want to reuse same compute resources

Containers are strategic deployment for WLS & FMW for Oracle so we in phase 2 will align with that

OCI Database options considered for database, with OCI File and Object Storage considered for files

Phased Approach

Phase 1 (Completed)

- **WLS 12.1 to 12.2 upgrade** (Minor changes)
- **DB 11.2 to 19c (19.8) RAC** upgrade (DataPump)
- **WebLogic Suite** on OCI Marketplace image
- Load Balancers through **LBaaS** (remove OHS layers)
- Traditional app deployment through Admin Console

Upgrade

Refine

Phase 2 – Next Steps

- Introduce **WAF** into reference architecture for enhanced security
- WLS on OKE Marketplace - **High degree of app consolidation, cost-effective**
- From DBCS to ATP for data storage (use of **ZDM** to eliminate downtime)
- Rework integration code with downstream systems (no local files)

Summary

WebLogic on OCI Marketplace (directly on compute)

- Traditional feel, **easy to provision-deploy, includes HA OOTB**
- Weblogic Suite includes Active Grid Link for TAC & HA/MAA at both layers
- **Predictable costing & performance (BYOL and License included available)**

WebLogic in microservice-led containerised platform

- There is quite a lot to learn, though OKE makes the K8s set up much easier
- **Nice patching with Jenkins pipelines**

Oracle database has different approach to segregation/containerisation

- **Autonomous database is the future** but **DBCS is good stepping stone**

Summary

Migration Experience

- **Easy, simplified and efficient E2E Provisioning** and Configuration
- Similar steps to **link & configure custom libraries** through “**setDomainEnv.sh**”
- **No code changes required** in either application or database layer

Improvements

- **Auto provision database layer** when JRF option enabled
- **Weblogic Marketplace to become a full Oracle PaaS offering**
- **Option and ability to patch Weblogic could be simplified and automated**

Infrastructure

2 AMD based Compute VMs with 1/8 OCPU and 1 GB memory each.

4 Arm-based Ampere A1 cores and 24 GB of memory usable as one VM or up to 4 VMs.

2 Block Volumes Storage, 200 GB total.

10 GB Object Storage.

10 GB Archive Storage.

Resource Manager: managed Terraform.

5 OCI Bastions.

Databases

Your choice of Oracle Autonomous Transaction Processing, Autonomous Data Warehouse, Autonomous JSON Database, or APEX Application Development. Two databases total, each with 1 OCPU and 20 GB storage.

NoSQL Database with 133 million reads per month, 133 million writes per month, 25 GB storage per table, up to 3 tables.

Observability and Management

Monitoring: 500 million ingestion datapoints, 1 billion retrieval datapoints.

Application Performance Monitoring: 1000 tracing events per hour.

Logging: 10 GB per month.

Notifications: 1 million sent through https per month, 1000 sent through email per month.

Service Connector Hub: 2 service connectors.

Additional services

Flexible Load Balancer: 1 instance, 10 Mbps.

Flexible Network Load Balancer.

Outbound Data Transfer: 10 TB per month.

Cloud Guard helps you monitor, identify and maintain a strong security posture on Oracle Cloud. Use the service to examine your Oracle Cloud Infrastructure resources for security weaknesses and to examine your operators and users for risky behavior. Upon detection, Cloud Guard can suggest, assist, or take corrective actions, based on your configuration.
