# THE POWER OF **PaaS**
FOR THE **PUBLIC SECTOR**

With the rise of digital government, citizens have never had higher expectations when it comes to interactions with government agencies and services. Meet the demands of today's modern citizens with a secure cloud platform that eliminates data silos and fragile point-to-point integrations.

THE CHALLENGE
IT Professionals are Mired in Administration

Government agencies are tired of having to spend time and money integrating mismatched applications, systems and networks.

75% Maintenance, integration and routine tasks

25% Innovation[1]

THE PRIORITIES
Top Challenges for Government IT Leaders

1 Stuck With Outdated, Underperforming Systems
Organizations need to replace legacy platforms and applications with modern, cloud-based solutions that can increase organizational efficiency, allow for upgrades and pave the way for digital advancements.

2 Facing Demands of Digital-first Citizens
Citizens now have high expectations for user-friendly digital services. To meet those needs, agencies require software solutions that allow for incremental software delivery with prototyping and the addition of new capabilities as part of the development process.

3 Limited by On-Premise, Disconnected Systems
To maximize IT resources while delivering on services to the public, organizations must have hybrid cloud solutions that provide scalable and elastic IT capabilities provided "as a service."

THE POTENTIAL
Delivering on the Promise of Cloud

Empowered with cloud-based Platform-as-a-Service (PaaS), your IT team can deploy applications faster as government priorities and regulations change. This frees up resources to focus on your agency's core mission of meeting the needs of citizens with reliable, user-friendly services available 24 hours a day.

Lift and Shift to Cloud
Easily manage a hybrid cloud environment to meet the demand for spikes in computing capacity.

Increase Capabilities with Hybrid Cloud
Extend existing applications with hybrid cloud to take advantage of new technologies like mobility and chatbots.

Move Development and Testing
Create new applications in a public cloud and deploy to on-prem.

Innovate and Predict
With rapid test/dev capabilities, employ advanced analytics to create new insights into government and citizen outcomes.
