

3 Reasons to Move Your On-Premises Apps to the Cloud

Businesses with legacy on-premises applications struggle to keep up with the rapidly changing business landscape and have a high cost of ownership due to rigid and outdated business processes, fragmented data, difficult upgrades, and limited access to innovations.

Challenges with legacy systems

Changing business demands

On-premises systems aren't agile enough to support strategic initiatives or meet the increasing demands from customers, partners, and employees. Technologies such as AI can help improve productivity and efficiency, but bolting AI to legacy systems can add complexity and increase maintenance cost.

High cost of ownership

Your on-premises systems accumulate technical debt every day and require a lot of dedicated IT staff to maintain them. You need to free up your IT resources to work on strategic projects so you can go from just maintaining operations to growing and thriving in the digital age.

Outdated security measures

The security landscape is changing fast, with new and more complex threats. You don't have the right technology or staff to address the latest security concerns and evolving compliance requirements. You struggle with data security, access controls, monitoring, and scalability issues.

CUSTOMER SUCCESS

“With Oracle Cloud Applications, we don't depend on multiple systems. Everything is connected in one platform—manufacturing operations, order fulfillment, supply chain, financial models, accounting, and reporting.”

Aniket Majumder, Director of IT, The Wonderful Company

How Oracle Cloud apps can help

Agile, always up-to-date applications

Fusion Cloud Applications are agile and adaptable to your business needs. We can partner with your business to identify its challenges and see how the latest technology can help drive business success. Plus, next-gen capabilities are delivered to your cloud apps automatically each quarter.

High performance cloud infrastructure

Since the Oracle Fusion Cloud Applications Suite runs on Oracle Cloud Infrastructure, technical debt is never a problem. Fusion Apps are designed to stay current with the latest innovations. Instead of maintaining old systems, your IT staff can focus on innovating and addressing business demands.

Layered security from hardware to apps

A unique advantage to Oracle is our multilayered approach to security. Security is built into every layer of the technology stack. We apply stringent security measures across our data centers, networks, and business applications to help you address security concerns and compliance requirements.

Simplify your business processes with the Oracle Fusion Cloud Applications Suite

Oracle can help support your journey to modernize your business-critical applications, paving the way to greater innovation.
