

# Oracle Database Performance Tuning Using oratop

Tips and tricks

---

 <https://www.slideshare.net/SandeshRao4>

## What is oratop

A text-based interface like “top”, which can be run against Real Application Cluster (RAC) or non-RAC databases

It provides the ability to monitor the database in near real time

# Visual layout

Oracle 21c - 19:30:56 Pri r/w cdbs up: 13h, 12 sn, 4G sga, 10%fra,	(1) Database
ID %CPU LOAD AAS ASC ASI ASW ISW IORT MBPS %FRE PGA UCPS SQRT %D	(2) Instance activity

# Command line mode

```
$ export ORACLE_HOME=<path>
$ export LD_LIBRARY_PATH=$ORACLE_HOME/lib
$ export PATH=$ORACLE_HOME/bin:$ORACLE_HOME/suptools/oratop:$PATH
```

```
$ ./oratop -h
oratop: Release 16.5.1
```

The oratop program provides a dynamic near real-time view of an open database  
It also provides a limited on-line interactive interface.

Usage:

```
oratop [ [Options] [Logon] ]
```

Logon: {username[@connect\_identifier] | / } [AS SYSDBA]

Password is prompted and the connect\_identifier is TNS/ EZconnect

Options:

- b: batch mode. Used with -n iteration (default is console)
- n: maximum number of iterations (requires a value)
- o: Write console output to a file (in batch mode)
- i: interval delay (requires a value, default: 5)
- r: real-time (RT) wait events. (section 3, default: Cumulative)
- m: Session/Process MODULE/ACTION (default: USERNAME/PROGRAM)
- s: SQL mode. (section 4, default: session/process mode)
- f: detailed format, 132 columns. (default: standard, 80 columns)
- v: oratop release version number
- h: this help

# Command line mode

```
$ export ORACLE_HOME=<path>
$ export LD_LIBRARY_PATH=$ORACLE_HOME/lib
$ export PATH=$ORACLE_HOME/bin:$ORACLE_HOME/suptools/oratop:$PATH
```

```
$ ./oratop -h
```

```
oratop: Release 16.5.1
```

The oratop program provides a dynamic near real-time view of an open database  
It also provides a limited on-line interactive interface.

Usage:

```
oratop [ [Options] [Logon] ]
```

Logon: {username[@connect\_identifier] | / } [AS SYSDBA]

Password is prompted and the connect\_identifier is TNS/ EZconnect

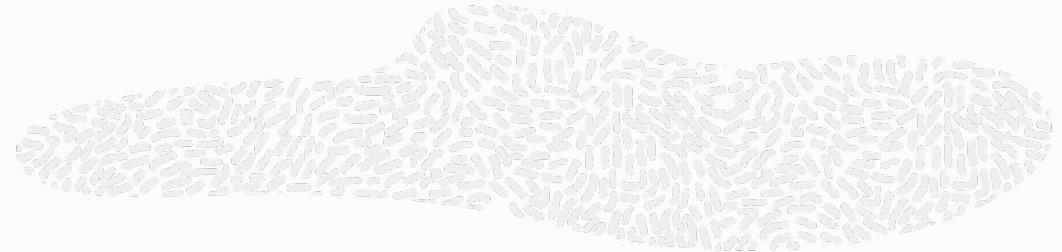

Options:

- b: batch mode. Used with -n iteration (default is console)
- n: maximum number of iterations (requires a value)
- o: Write console output to a file (in batch mode)
- i: interval delay (requires a value, default: 5)
- r: real-time (RT) wait events. (section 3, default: Cumulative)
- m: Session/Process MODULE/ACTION (default: USERNAME/PROGRAM)
- s: SQL mode. (section 4, default: session/process mode)
- f: detailed format, 132 columns. (default: standard, 80 columns)
- v: oratop release version number
- h: this help

# Login

Connection method is like sqlplus

```
$ oratop / as sysdba
```

Connecting “ / as sysdba“ is allowed only for bequeath connections

The remote database requires setting the parameter “REMOTE\_LOGIN\_PASSWORDFILE” paired with the availability of an Oracle password file.

# Login

TNS:

export TNS\_ADMIN and connect with a TNS alias name as defined in tnsnames.ora

EZConnect, example:

```
oratop sys@rmtdbhost:1521/db1.domain.com as sysdba
```

TWO\_TASK can be set with any of the above for ease of use, example

```
$ export TWO_TASK= rmtdbhost:1521/db1.domain.com
```

```
$ ./oratop sys as sysdba
```

```
oratop: Release 16.5.1 Production on Fri Feb 11 05:54:50 UTC 2022

```

# Interactive Mode

Options can be seen after starting the utility followed by pressing the keyboard key 'h'

oratop: Release 16.5.1

Interactive Keys: [default]

- f : toggle between [standard] & detailed format
- r : toggle between [Cumulative @] & Real-Time (RT) (section 3)
- s : switch to SQL mode (section 4)
- p : switch to [session/process] mode (section 4)
- m : Toggle session [USERNAME/PROGRAM] & MODULE/ACTION (sections 4)
- t : tablespace information (N/A on standby)
- x : SQL plan table (requires a value)
- I : refresh interval, requires value in seconds [5]
- q : quit/ exit program
- Esc : pause.

Symbols:

- (B)tyle, (K)illo, (M)ega, (G)iga, (T)err, [PEXY]
- (u)micro, (m)illi, (s)econd, minu(t)e, (h)our, (d)ay, (y)ear
- [60s/ 15s] - metric interval size, else current.

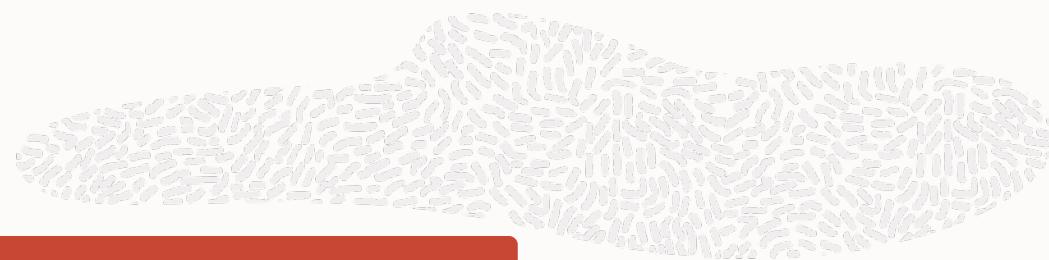

Abbreviations Help Menu:

Section 1 - DATABASE	.. [1]
Section 2 - INSTANCE	.. [2]
Section 3 - DB WAIT EVENTS	.. [3]
Section 4 - SESSION/PROCESS	.. [4]
Quit Help	.. (q Q)

Enter selection number:

# Miscellaneous

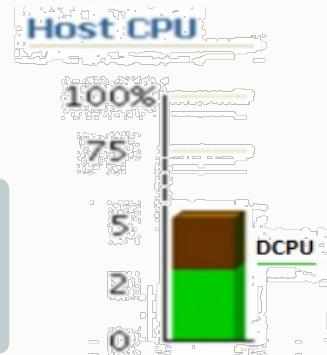

## Values appearing in RED color

Values flagged and highlighted in red color are merely an emphasis of warning

**Header's** “archivelog” and “er” (incidents) These two values are static, they are acquired once upon start of monitoring only. They are not auto refreshed because the first incur expensive recursive query and the second adds to diagnosability database waits

## Header's %DCP

Column “%DCP” (in section 2) is the database instance cpu usage as %CPU of the host

## Tablespaces listing

A list of all the tablespaces (cdb and pdb) can be obtained online with keyboard key press ‘t’

## Wait Events (section 3)

Keyboard key press ‘r’ will toggle the wait event section between Cumulative and Realtime. For C, the stats shown is the accumulation since the last database restart

# Miscellaneous

## Detailed format (long)

# Miscellaneous

## Exiting

To quit the program gracefully, user may press keyboard keys: "q" or "Q", or Esc key. A Ctrl+c to abort forcibly. In all cases, proper database logout is performed

## Unprivileged user

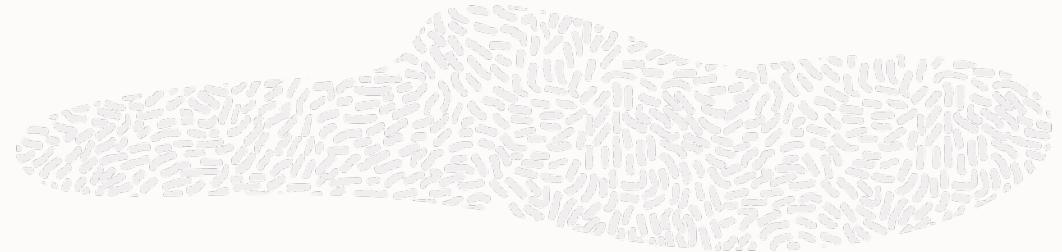

A typical error encountered by a non-privileged user upon connection to the database using the tool is “ORA-00942: table or view does not exist”

To allow the non-privileged user to use oratop, the system administrator with a DBA role may issue the following grant: “GRANT SELECT ANY DICTIONARY TO ;”

## Standby or mounted database instance

- **STANDBY** - key press “t” for “TABLESPACE INFORMATION” will not return any rows. Reason: BUG 27841703
- **MOUNTED** Instance – Section 2 will show inst\_id highlighted in red color. Reason: Required statistics is not available until instance is opened.

# Monitoring a database every 10 seconds

## Monitor a local database:

```
$ ./oratop -i 10 / as sysdba
```

## Monitoring a remote database:

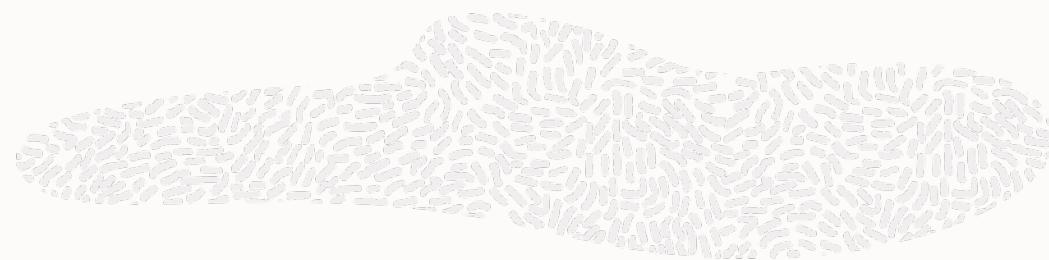

```
$ ./oratop -i 10 username/password@tns_alias
```

Or

```
$ ./oratop -i 10 system/manager@tns_alias
```
