

Aconex for Defense:

Military grade construction and engineering mission information management

Defense agencies and their construction and engineering delivery partners need a modern, cloud-based collaboration and program management solution with heightened security controls for protecting controlled unclassified information (CUI) and preventing disruptions while collaborating and sharing mission critical documents.

Aconex for Defense is the only purpose-built project and program information management solution to have achieved FedRAMP and Defense Information System Agency Impact Level 4 accreditations, having passed the assessment of more than 1,700 security technical implementation guides and over 400 security controls defined by DISA for handling defense agency information.

Secure, modern, collaboration and program governance

Aside from the peace of mind regarding cybersecurity, Aconex for Defense offers project governance, document controls, improved transparency with anytime, anywhere access to the latest project information from a browser or mobile app, an audit trail for accountability, 3D model viewing for better visualization and preventing waste from rework, to name a few of the features included.

Whether the mission is infrastructure or buildings, vehicle or weapons systems, there is typically a plethora of disparate or unmanaged data, unorganized reams of digital documents, and multiple people from different organizations accessing multiple systems to obtain and share pertinent information to complete a task. A single source of truth can make all the difference in efficiency and performance. Program managers can ascertain the latest information, generate reports, or report up the chain of command at a moment's notice.

Oracle Aconex helps many contractors and public agencies around the world connect teams and stakeholders through a modern, purpose-built project management application. Aconex for Defense

Features of Aconex for Defense include:

- Integrated 3D model viewing
- Document controls
- Revision history
- Bid and supplier documents
- Meta-data-based search engine
- Work packaging
- Configurable automated workflow
- Transmittals
- Task management
- Reports
- Audit trail
- iOS and Android mobile apps

is a high compliance instance of Aconex, physically separated from the public cloud, and has gone through a rigorous process, assessed by a third-party assessment organization (3PAO) and is monitored continuously for threats. It is the only construction and engineering project management application to have achieved FedRAMP Moderate and DISA Impact Level 4 authorizations, meeting the stringent compliance requirements of both the U.S. Government and the Department of Defense.

Agencies and their mission delivery partners are assured that their cloud information management solution is in compliance, and users have a single source of truth for sharing and consuming information that helps them make proactive decision-making at speed and maintain mission momentum.

Security controls included with Aconex for Defense:

- Encrypted data at rest and in transit
- 2-Factor authentication
- Complex password support
- Continuous monitoring
- Rapid remediation
- FedRAMP moderate
- DISA IL 4 authorization
- Additional 400+ DISA-specific security controls and 1700+ STIGs
