Oracle's primary business is to provide enterprise network computing products and services to the commercial market, both to end customers and through our Cloud service offerings. This includes electronic computer systems ranging from data center-class servers and storage systems to networking and point of sale terminals, software, support and professional services for commercial enterprises. These systems are typically large-scale. The product installations may include equipment from other OEM producers, and if these are included in the take back, we will process all equipment using the same environmental best practices.

The following tables report globally, by region, the volume of electronic equipment collected and managed in an environmentally sound manner through Oracle's Reverse Supply Chain Operations approved electronic product recyclers. As part of Oracle's Electronic Recycler Audit Program, Oracle's contracted recyclers are required to adhere to the Oracle Electronic Recycler Audit Standard. Oracle's Standard is generally aligned with select elements of the *R2 Responsible Recycling Standard* (<https://sustainableelectronics.org/r2-standard>) and defines the minimum requirements to become an approved electronic recycler for Oracle's Take-Back and Recycling Programs.

In order to meet local compliance obligations associated with the placement of electronic products, batteries and packaging on given markets, Oracle has also joined compliance schemes and product stewardship programs in certain countries and jurisdictions. In FY21, Oracle actively paid environmental compliance fees in over 60 jurisdictions, up from 35 locations in FY14. To date we have seen a 10% upward trend year over year due to increasing regulations. Although Oracle is only currently obligated to pay producer and compliance scheme fees in about 60 countries, it has obligations in many other countries that do not result in levied fees.

Collection Efforts (Data from Oracle's Fiscal Year 2021: June 1, 2020 – May 31, 2021)
