What is Oracle SAE

Oracle Student Aid Eligibility (SAE) is a financial aid application management solution that leverages Oracles Student Financial Planning (SFP) technology. It's a cloud-based, configurable, user-driven solution that manages your federal, state, and institutional financial aid application process. It processes and manages ISIRs, verification, financial aid related documents, aid application files, and associated reporting.

1 Apply for Aid

SFP automatically imports Institution Student Information Reports (ISIRs), state, or institutional applications. It requests documents to manage 'C' Code processing or other application-related issues.

2 Verification

SAE processes all verification types, notifies students of issues, and requests additional information from your students. SAE's automation speeds up financial aid communication to users by up to 43%. Students receive personalized communications and can submit documents to your institution in real time on our delivered portal.

3 Document Management

SAE's out-of-the-box automation allows you to request, upload, and review all kinds of financial aid application documents. It checks documents for completeness and can share the collected data with your financial aid module and student information system.

4 Regulatory compliance and analytics

Access to data is critical for your institution to be proactive in making the right financial aid decisions. Whether using delivered reports, or creating your own, SAE turns data into insight and information into knowledge.

Student Aid Eligibility is part of Oracle's Student Financial Planning solution, which delivers a game-changing financial aid solution that manages each student's financial plan individually and visibility throughout their entire academic journey, supporting better-informed financial decisions and optimized outcomes.
