

ORACLE VALIDATED INTEGRATION DATASHEET

Belmero Inc.

BlueQ SmartScan Integration with PeopleSoft 9.2

BlueQ SmartScan for healthcare is a productivity and cost-saving solution that can help you maximize your ROI of Oracle's PeopleSoft and reduce your overall supply chain costs. BlueQ SmartScan is a seamless extension to your PeopleSoft software, offering immediate improvement in the efficiency of the supply chain management process.

COMPANY OVERVIEW

Since its launch in 2011, Belmero has expanded to provide services in many industries in North America with ERP experts who use Belmero's skillful, responsive, and customer proprietary solutions. The company's mission is to reenergize its clients' strategic visions to help them achieve a big ROI. Belmero partnered with BlueBin to provide the BlueQ SmartScan solution, helping to simplify the supply chain process for healthcare, reduce costs and operational waste, and allow clinicians to focus on what matters most—providing quality care to patients.

INTEGRATION OVERVIEW

The integration between BlueQ SmartScan and Oracle's PeopleSoft uses a proven, reliable, and industry-standard integration method. The BlueQ SmartScan software as a service sends a delimited file via secure FTP to PeopleSoft. The BlueQ SmartScan Connector for PeopleSoft, a PeopleSoft PeopleTools project, will process the file, prepare and enrich the data, and strategically insert the data into a delivered PeopleSoft inventory staging table. All further processing is completed by processes delivered by PeopleSoft.

INTEGRATION DETAILS

The integration between BlueQ SmartScan and PeopleSoft uses a delimited file. All files are transferred using secure FTP. Files sent to PeopleSoft are imported and processed by the BlueQ SmartScan Connector for PeopleSoft. This is a PeopleTools project specifically built to import, process, enrich, and strategically write the data to a delivered PeopleSoft Inventory staging table. At this point, delivered PeopleSoft processes will finish processing the PAR or Kanban replenishment, either creating a requisition, staging for purchase order build, or creating a material stock request.

ORACLE
Validated Integration
PeopleSoft

Oracle Validated Integration provides customers with confidence that a partner's integration with an on-premises Oracle application is functionally sound and performs as designed. This can help customers reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.
