

ORACLE VALIDATED INTEGRATION DATA SHEET

InFlight Corporation

InFlight NLX Integration with PeopleSoft 9.2

InFlight offers a software solution that makes it fast, easy, and affordable to radically transform the user experience for Oracle's PeopleSoft across all device types—from desktop to tablet to mobile—without sacrificing the existing business logic, customizations, or security that you count on. InFlight makes it possible to modernize without compromise.

COMPANY OVERVIEW

InFlight Corporation develops and sells technology that enables customers to economically extract maximum value from their existing enterprise and line-of-business applications. Its software has proven indispensable to companies across a wide range of industry verticals and sizes. Whether you have just a few hundred users locally or more than 300,000 users worldwide, InFlight software can help you derive more value from your applications.

INTEGRATION OVERVIEW

InFlight enables you to reinvent the PeopleSoft look and feel, optimize the presentation, and improve usability for your end users. This transformed content can be surfaced directly to mobile devices or embedded in third-party portal systems.

InFlight works by brokering communication between end users and PeopleSoft. It connects to PeopleSoft web servers and requests content the way an end user would. InFlight then transforms rendered content using a sophisticated engine called InFlight Next Level Transformation (NLX). This means PeopleSoft's entire security stack, role-based access controls, business logic, and validation rules are automatically applied—saving you from reinventing what you already own.

InFlight NLX distills rendered, security-trimmed PeopleSoft content into user-first and mobile-first interface designs to dramatically improve usability across all device types for both customized and delivered PeopleSoft content. Users can view and make changes to their PeopleSoft data without having to leave their intranet portal or pinch-zoom to manipulate forms.

InFlight customers enjoy the following benefits:

- Integrate content from PeopleSoft systems into third-party portal systems—or directly to mobile devices—quickly, easily, and cost-effectively. No customization to PeopleSoft is required.
- Get a modern user experience across desktop, tablet, and mobile devices without incurring the cost or disruption of migrating to a new ERP system.
- See results quickly; InFlight installs in hours and most implementations begin and end within a few weeks.
- Preserve PeopleSoft's native security stack and business logic.

ORACLE
Validated Integration
PeopleSoft

Oracle Validated Integration provides customers with confidence that a partner's integration with an on-premise Oracle application is functionally sound and performs as designed. This can help customers reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.

InFlight is offered with following optional features:

- Single sign-on (SSO) capability
- Ability to implement a complete strategy for creating accessibility-compliant content in conformance with government regulations
- Prepackaged sets of modernized PeopleSoft content
- An offline editor to enable rapid prototyping of mobile-friendly content

INTEGRATION DETAILS

InFlight NLX is an HTTP reverse proxy server paired with a powerful content transformation engine.

The InFlight NLX transformation engine is a rules-based system that uses web-standard technologies—such as Regular Expressions and jQuery/CSS3 selectors—to filter and transform PeopleSoft content without having to modify the PeopleSoft system itself.

InFlight customers are able to deliver any PeopleSoft content to mobile devices or to third-party portals, including components, navigation collections, pagelets, and queries. InFlight is commonly used to improve the end user experience for:

- Employee and manager self service
- Time and expense entry
- Manager approvals
- Benefits
- Onboarding
