

Ingentis Softwareentwicklung

Ingentis org.manager Integration with PeopleSoft 9.2

Ingentis org.manager is an efficient tool for organizational charts, design, and analytics. With it, you can create custom, data-rich org charts within minutes for a clear overview of your organization. Key metrics—such as headcount, gender distribution, demographic analysis, or budget reconciliation—can be calculated and displayed either along the hierarchy or in dashboards, enabling efficient HR analytics and control. Its powerful modeling feature facilitates reorganizations and enables scenario planning based on the current organizational structure. Additionally, the software offers a wide variety of data visualizations that are useful when conducting organizational design activities.

COMPANY OVERVIEW

Founded in 1997, today Ingentis is the software house for HR add-ons and business applications. From its headquarters in Nuremberg, Germany and its subsidiary in Petaluma, California, United States, it serves its clients and partners around the globe. Ingentis advocates fair, reliable business relationships. More than 2,000 customers worldwide count on this honest, successful approach. In addition to its flagship product Ingentis org.manager, the company's HR software portfolio includes Ingentis distribution.list for the management of dynamic distribution groups, and the SaaS solution orginio for the creation of org charts in the cloud.

INTEGRATION OVERVIEW

Ingentis org.manager is a Microsoft Windows-based application. It runs on a Windows server and connects to Oracle's PeopleSoft via SQL interface. The solution processes the data by considering the customer-specific settings regarding content, features, and design of the org charts and creates HTML-based output that can be accessed by internet browser.

INTEGRATION DETAILS

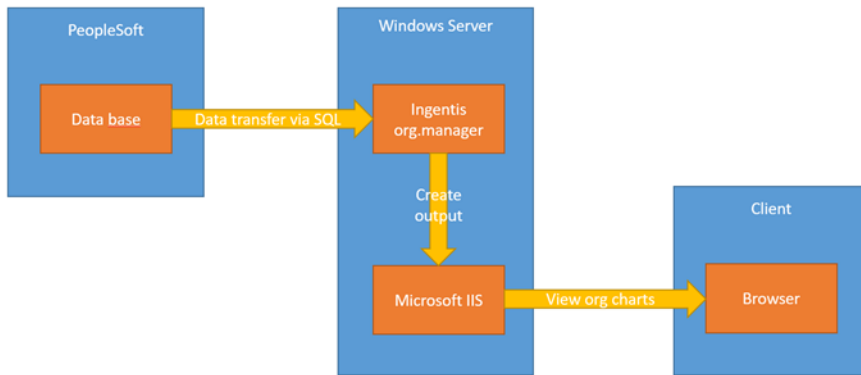

Ingentis org.manager connects to PeopleSoft via SQL interface. Data is fetched by select statement or via tables and/or views provided by PeopleSoft. The SQL queries can be adapted to customer-specific requirements. Ingentis org.manager processes the data and creates pure, HTML-5 based output that is stored on the same server. Using the internet information services (IIS) as a web server, the org charts can be accessed by internet browser.

ORACLE
Validated Integration
PeopleSoft

Oracle Validated Integration provides customers with confidence that a partner's integration with an on-premise Oracle application is functionally sound and performs as designed. This can help customers reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.

High-level architecture of the integration between Ingentis org.manager and PeopleSoft
