Oracle Validated Integration provides customers with confidence that a partner's integration with an Oracle on-premises application is functionally sound and performs as designed. This can help customers reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.

iVvy Venues: A cloud-based sales and catering system for any size hotel

Streamline your use of iVvy Venues with a two-way integration with Oracle Hospitality OPERA property management system (PMS) that enables information sharing and data transfer on room blocks, reservations, contacts, and the average rate index (ARI).

Company Overview

iVvy Venues management software is used by more than 14,000 users across 13 countries to locate the perfect venue for their events and then to manage all aspects of the event. The software is designed to make it easy for hotels to market, manage, and report on function venues with instant visibility so you can create demand, deliver instant quotes and proposals, and streamline operations. From increasing your revenue to streamlining venue management and intelligent reporting, the iVvy platform helps hotels to distribute inventory, optimize sales activity, and enable real-time bookings.

Integration Overview

The integration between iVvy Venues and Oracle Hospitality OPERA PMS allows group blocks to be created in iVvy and then transferred into the PMS. The size of the block can be adjusted either in the PMS or in iVvy. Reservations for the block can then be transferred into Oracle Hospitality OPERA. Changes to reservation statuses are displayed in iVvy for use by the events team. The ARI is updated in iVvy in real-time to ensure that the group rooms control is up to date.

Integration Details

The integration uses the OPERA exchange interface (OXI) to facilitate two-way data transfer between the iVvy platform and Oracle Hospitality OPERA.

The integration enables you to transfer the following data from iVvy to Oracle Hospitality OPERA:

- Create, update, and cancel blocks
- Create, update, and cancel reservations on a block created in iVvy Venues

You can also transfer data from Oracle Hospitality OPERA to the iVvy platform, including:

- Standard, daily, and base rate codes
- Inventory
- Restrictions, including open and close restrictions only
- Updates on blocks that were originally created in iVvy
- Reservations that are made against iVvy created blocks
