Oracle Financial Services

Oracle Validated Integration provides customers with confidence that a partner's integration with an Oracle on-premises application is functionally sound and performs as designed. This can help customers reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.

Banking Analytics Simplified

FinCluez is a complete business intelligence (BI) and analytics suite for banking featuring best-in-class self-service, fast scalable analysis, a robust governance model, and a future proof architecture. FinCluez easily integrates with all transaction systems of a bank and transforms data in these systems into cohesive, centralized datamarts serving as single source of truth for analytical, operational, regulatory and compliance reporting needs. FinCluez delivers insights on a cutting-edge, anywhere/anytime, self-service platform.

Company Overview

Founded by an energetic team with deep experience in software product development and services delivery, Profinch Solutions is an IT products and services company, currently focusing on the banking and financial services industry. The deep domain expertise, rich experience, and innovation-driven processes and methodologies enable Profinch to deliver projects with high quality and minimal cost within given timelines.

An Oracle Gold Partner, Profinch's partner offerings include core banking transformation, support, application development, and testing of the Oracle Financial Services suite of products. Profinch's expertise lies in fitting Oracle solutions to Oracle Financial Services customer's needs, thus achieving customer delight.

In the three years since its inception, Profinch has executed multiple end-to-end implementation projects and complex consulting assignments on Oracle FLEXCUBE and Oracle Banking digital experience. FinCluez, the in-house BI and analytics offering from Profinch, is an outcome of the decades of domain expertise of our core team. Profinch has already established its footprint in more than 25 banks and financial institutions across the globe. Profinch has offices in India and UAE to cater to the ever-increasing number of customers across the globe.

Integration Overview

Data integration for BI and analytics requires an in-depth knowledge of source systems. While silo data warehouse tools solve the technical need for data integration, the lack of source system knowledge jeopardizes the business value in any BI endeavor.

FinCluez is pre-integrated with Oracle FLEXCUBE and other systems in the banking ecosystem—such as treasury, customer relationship management, and card management—through its proprietary data integration component. FinCluez transforms

AVAILABILITY

FinCluez is generally available with perpetual or subscription-based licensing options.

transactional data from these systems into actionable insights and makes it available to various levels of business users without the need for developers, designers, or data scientists.

FinCluez offers prebuilt datamarts with thousands of precomputed key performance indicators (KPIs) that offer critical insights across credit, liabilities, finance, treasury, trade, performance management, and risk. FinCluez datamarts serve as single source of truth for delivering analytical dashboards and reports across analytical, operational, regulatory, and compliance reporting needs.

Integration Details

FinCluez is pre-integrated with Oracle FLEXCUBE through a metadata-based data integration engine that allows declarative definition of tables to be extracted.

- The connection to Oracle FLEXCUBE is achieved through JDBC connectivity, which can be securely defined through a user interface (UI).
- FinCluez is prepackaged with metadata dictionaries of tables to be extracted from Oracle FLEXCUBE.
- Data extraction can be fully modularized and sequenced to take care of the data dependencies of Oracle FLEXCUBE tables.
- FinCluez can be configured to extract historical data from Oracle FLEXCUBE as a one-time activity during migration.
- Full or incremental extract strategy can be configured by each table for daily extraction. This has been preconfigured in FinCluez for Oracle FLEXCUBE tables to optimize data extraction.
- Data extraction from Oracle FLEXCUBE can be scheduled using the built-in FinCluez scheduler.
- Data extraction and loading can be invoked and monitored through a modern, web-based FinCluez UI console, governed through security and access control.
- FinCluez performs transformation processing on the data acquired across multiple systems and delivers prebuilt datamarts with thousands of precomputed KPIs that offer critical insights across credit, liabilities, finance, treasury, trade, performance management, and risk.
