

ORACLE VALIDATED INTEGRATION DATA SHEET

Q Software

Q Software Integration with JD Edwards EnterpriseOne 9.2

Q Software Global Limited is a software application company specializing in solutions and services that audit and manage security for ERP software and systems.

COMPANY OVERVIEW

Since 1996, Q Software has worked closely with auditors, consultants, and customers from a wide range of industries, gaining in-depth knowledge of diverse security and compliance needs and applying that expertise to the development of solutions and services for Oracle's JD Edwards EnterpriseOne.

Close links with user communities also enhances the company's understanding of customers' changing requirements. Q Software is an active member of Quest, the Oracle Applications User Group, and the United Kingdom Oracle Users Group (UKOUG), and it participates in many user group meetings and conferences.

Founded in the UK, Q Software has more than 300 customers in 58 countries, serviced by offices in the United States, UK, and Australia as well as a global network of sales and service partners.

INTEGRATION OVERVIEW

Q Software's applications are developed completely within JD Edwards EnterpriseOne using standard development tools. The application suite includes more than 3,000 custom objects for applications that audit, manage, or enhance security and security administration features in JD Edwards EnterpriseOne. It does not modify or change any standard foundation or application software code and does not interfere with normal JD Edwards EnterpriseOne application functions or upgrades in any way.

INTEGRATION DETAILS

Since Q Software's applications operate within JD Edwards EnterpriseOne and function exactly as a JD Edwards-developed application, no external integration applications or middleware are required. Q Software's objects follow the same standard naming conventions as JD Edwards EnterpriseOne. For example, its applications are prefixed with "P" and its tables prefixed with "F."

The applications from Q Software either provide features and functionality that do not exist in JD Edwards EnterpriseOne or they extend existing functionality. At no time is the functionality or logic of standard JD Edwards EnterpriseOne applications changed or affected by Q Software applications and logic.

ORACLE Validated Integration JD Edwards EnterpriseOne

Oracle Validated Integration provides customers with confidence that a partner's integration with an on-premise Oracle application is functionally sound and performs as designed. This can help customers reduce deployment risk, lower total cost of ownership, and improve the user experience related to the partner's integrated offering.
