

Unlock the full potential of your K-12 educational institution

Accelerate your transformation to Oracle Cloud

K-12 institutions can improve student outcomes and manage complex operations by transitioning to Oracle Cloud. IBM Consulting® has the expertise to accelerate your digital transformation and ensure that it's data-driven, agile and secure.

IBM and Oracle have partnered to deliver efficient tech solutions to K-12 institutions for decades and we're familiar with the sector's challenges and opportunities—from attracting the right talent to managing payroll for both salaried employees and contractors. For example, your faculty and support staff may work for 9 months a year, but your payroll obligations are year-round. Plus, local legislative requirements can impact how you track employee start dates and paid leaves. It can get complex very quickly.

IBM and Oracle offer a comprehensive solution set to add efficiency to every stage of the employee lifecycle. We can:

- Develop a custom roadmap for your institution's digital transformation
- Optimize your IT infrastructure for cloud deployments and scalability
- Improve your decision-making through data analytics and artificial intelligence
- Bolster cybersecurity, risk and compliance management
- Facilitate the adoption of new technologies through change management and training programs

Why you should choose IBM Consulting to implement Oracle Cloud

Nearly 40 years of fruitful partnership with Oracle

Proven track record of delivering successful projects in the K-12 sector

Global expertise to support your institution's unique needs

Collaborative approach to co-create solutions that meet your goals and objectives

Contact us to understand how IBM can help your K-12 educational institution thrive in today's digital landscape.
