

Clinical One Study Builder Instruction for Randomization and Trial Supply Management and Data Collection

INSTRUCTION

Oracle Health Sciences Clinical One unifies people, processes and data to simplify clinical trials and provide capabilities that are needed for today's trials. The "Study Designer" is a single service that is used across the capabilities of Clinical One.

The *Clinical One Instruction Program* is designed to provide Sponsors, CROs, and Oracle PartnerNetwork (OPN) members with the necessary skills to configure, setup, and manage a Study in Clinical One.

Upon completion of the program, attendees will be able to build studies independently using Clinical One, and have in-depth working knowledge of how to build data collection forms, create visits, randomizations, manage supplies, and support data management.

Clinical One Instruction Program Overview:

- *Study Builder instruction*
- *Certificate of completion of the program*

Study Builder instruction includes the following topics*:

- *Creating a study and editing settings*
- *Building visits and forms*
- *Flexible supply management*
- *Complex randomization design made simple*
- *One-click study deployments*
- *Import or generate your randomized/kit lists*
- *Creating sites, depots and users*
- *Smart Training*
- *Data validations from Rules to Query Management*
- *Integrations*

SOLUTION FOCUS:

- Combined instruction includes:
 - Oracle Health Sciences Clinical One Randomization and Trial Supplies Management (RTSM)
 - Oracle Health Sciences Clinical One Data Collection

DELIVERY: Live Virtual Class

CLASS SIZE: 6 min / 8 max

LANGUAGES OFFERED: English

AUDIENCE:

Study Builders, Clinical Programmers, Data Managers, Randomization Designers, Supply Managers

All enrollees must have a working knowledge of, or have previously used an RTSM and EDC system.
