

Oracle Primavera

Unlock the power of your solutions with Optimization Services

Make sure your organization takes full advantage of project and portfolio processes and tools with an intelligent, well-designed implementation strategy.

Our professional services team has the experience and expertise to help you get the most from your products and applications. We help you unlock the power of your solutions and use your technology investment to deliver better results, increase operational efficiency, drive down costs, and secure vital data.

Consultants provide technical and business guidance

Make sure you're getting the maximum return on your software investment. Our team of expert and experienced consultants are available to review, evaluate, and improve your implementation, including your configuration, processes, procedures, technical environment, and infrastructure—even your integrations with other Oracle or third-party systems.

Professional services consultants focus on the unique challenges of managing and deploying enterprise project management applications. Whether your business is looking for high performance and availability to meet customer and partner demands or improved operational efficiency to reduce your total spend, our team can help.

Invest in an Optimization Services package

Our consultants can review and provide recommendations regarding your organization's unique IT and system requirements for your on-premises or cloud implementation. More specifically, we offer the following services:

Application processes and procedures review

Our consultants review your current implementation configuration, including business processes, security profiles, key data structures, user interface views, the setup and utilization of resources, roles, and costs, features and functionality, and project and activity coding structures.

We'll also review the supporting business processes governing ideation, project creation, prioritization, and selection; scheduling execution and control methods; and reporting and project closeout procedures.

Technical review

For on-premises installations, we'll review the database server, web application server, and desktop clients in the production and test environments for recommended system configurations for running Oracle Primavera's suite of applications, including Primavera P6 Enterprise Project Portfolio Management, Primavera Unifier, Primavera Portfolio Management, and Primavera Analytics.

We'll also facilitate discussions about common architectures used in similar technical and/or industry-related environments as well as planned capacity and projected growth.

Interface review

Our consultants will review system interfaces, including integrations with existing Oracle applications and integrations with third-party systems, where applicable.

How are we different?

Our professional services team is focused exclusively on Oracle technologies. We have the experts that others turn to for leading practices. We know how to best optimize your investment in our products and provide your business with tightly integrated, comprehensive, superior services throughout your ownership experience.

Solutions made easy

Oracle offers a variety of flexible professional services, including comprehensive implementation programs, onsite consulting, software installation, workshops, manuals, reports, coaching, and educational programs.

How can we help you succeed?

We provide specialized knowledge, expertise, and technical skills, enabling you and your team to get the most from our platform and applications.

Our team is ready and waiting to discuss the services we can provide and how we can support your success.
