

Oracle Secure Backup (OSB) 19.1 Supported Platforms and Browsers

Platforms	Operating Systems and Versions
AIX	7.1 TL5, 7.2 TL4, 7.3 TL1
HP-UX	11.31
Linux x86 (64bit)	RH7, RH8, RH9 OEL7, OL8 ¹ , OL9 ¹ , SLES 12, SLES15
SPARC (64-bit)	V11.3, V11.4, V10 (update 11)
Solaris x86 (64-bit)	V11.3, V11.4
Windows x86 (64-bit)	Windows Server 2016, 2019, 2022
Virtualization	
Oracle VM Server for Linux, Solaris x86 and Windows	Linux, Solaris x86 and Windows An Oracle VM Server may be configured in the Oracle Secure Backup Administrative Server and/or Client role(s). A VM Server can be configured in the Media Server role only if an OSB Diskpool or Cloud Device is used. Tape devices are not supported because they require SCSI pass through which is not supported.
Oracle VM Server for Solaris SPARC	Solaris SPARC - All Oracle Secure Backup roles are supported. Tape and OSB Diskpool Cloud Devices are supported - Refer to My Oracle Support note 1577295.1 – Implementing Oracle Secure Backup Media Servers in Oracle VM for SPARC domains
NAS devices	Operating Systems and Versions
Oracle ZFS Storage Appliance	2010.Q3, 2011.1.1, 2013.1.3.0 or later Refer to My Oracle Support Note 1302117.1 for additional qualification details
OSB Web Tool: Supported Browsers	
Google Chrome Microsoft IE/Edge Mozilla Firefox Apple Safari	The browser and version is supported by Oracle Secure Backup as supported by the underlying platform. Typical OSB configurations will run the webserver daemons on the admin. The OSB webserver will be accessed from the user's desktop running the browsers as listed.

C-shell is a prerequisite on Linux, Solaris, HP-UX, AIX

1: libnsl must be installed on Oracle Linux 8 and 9 (use sudo yum install libnsl)

2: Windows 2016 media server does not support tape devices, Diskpools and Cloud Devices only are supported.
