

Automation of contracts & time sheeting processes

- Education

1 Business Challenge

A “Sandstone” University with in excess of 3,500 academic staff, reliant on a paper based contracts and payment system.

Challenge:

- reduce academic’s time spent on admin
- reduce vulnerability to fraud
- improve reporting
- improve user experience
- drive consistent processes across divisions
- improve payment flexibility
- streamline the HR process

2 Solution

Using Oracle BPM, Innodev was able to extend the functional capabilities, and create a solution that executed with similar values/personality as promoted by the Universities environment: *academic, transparent, trust & respect.*

The risks in dealing with change are addressed by the organisation moving into a more process automated environment, while retaining a familiar look & feel.

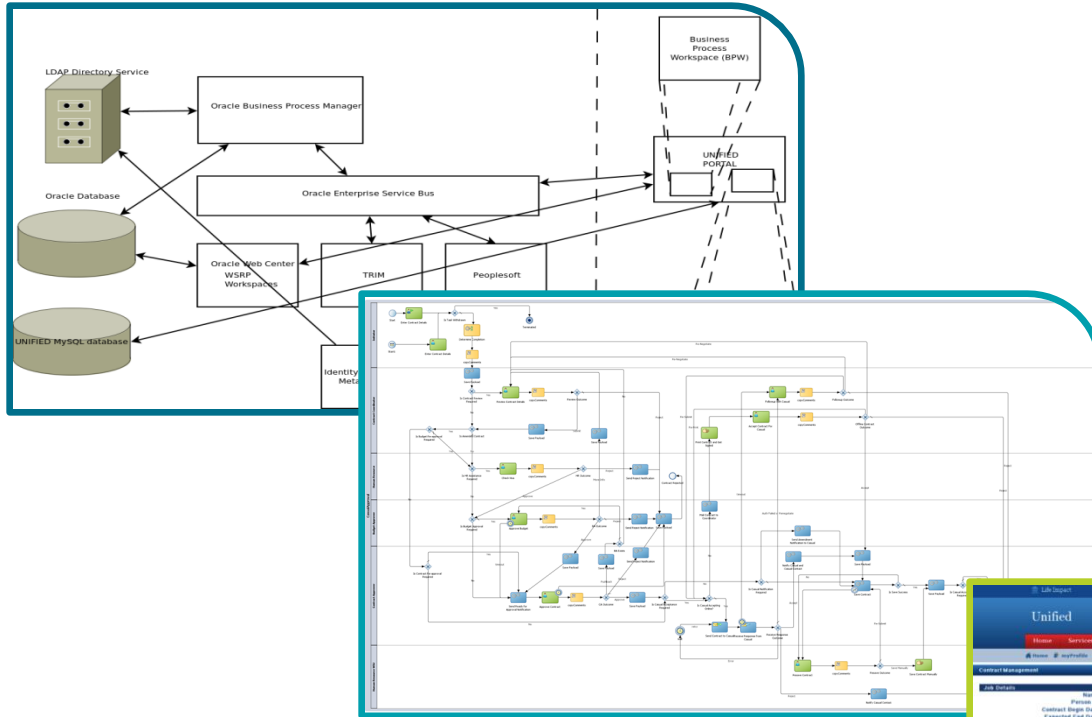

3 Results & References

- 20% reduction of academic staff time spent on admin related tasks.
- Framework for reuse
 - 3 projects to date leveraging the developed framework
- A process that is both measurable and visible to the executive
