

Analyze Insight

Delivering CRO oversight

Outsourcing clinical trials introduces complexities, especially when you're working with multiple CROs. What if you had visibility into their progress that was presented in a standard and consistent format?

Move from tactical to strategic

The most successful sponsor–CRO partnerships are those that have evolved from tactical, project-oriented relationships to committed, strategic relationships. At the core of this transition is a desire to build a long-lasting partnership, which requires open and transparent communications, fostering a foundation of trust and commitment. Real-time insights into study progression aids in communications and governance. Oracle Health Sciences Analyze Insight for Activate Cloud Service (Analyze Insight) improves operational efficiencies and strengthens relationships with CROs by providing clinical trial performance transparency in a secure and controlled manner, which facilitates communications on study progress and bottleneck resolution to deliver faster study startup.

Gain transparency in outsourced studies

Reconciling data across multiple CROs across your portfolio with different reporting formats can make timely oversight difficult and obscure performance trends. Readily proving you're on track can be an ongoing challenge. Analyze Insight can make these challenges a thing of the past by providing real-time access to a wealth of data across your study portfolio and CRO partners, replacing the need for the manual preparation of routine reports and eliminating time wasted on non-productive activities, such as status meetings.

“CRO oversight has become part of the mix of relationship building along with centralized monitoring and study-related metrics. These practices help sponsors fine tune their tracking of clinical trial progress, and together, these operational changes form a solid basis for continuous quality management as studies unfold.”

ROBERT GOODWIN
VP Global Clinical Data Services,
PFIZER

Analyze Insight improves transparency, communication and collaboration with CROs, leading to enhanced performance and governance of outsourced clinical trials.

Get a standardized view

Standardized reports ensure that all CROs are providing study statuses in a way that is reproducible and comparable across study dimensions. This ensures quality earlier in the study activation process and eliminates disparities between organizations. Oversight improves allowing sponsors to build reliable institutional knowledge about CRO performance. This ensures stakeholders realize the full potential of collaborative outsourcing arrangements and better position clinical trials for success. Analyze Insight reports provide sponsors with granular performance data on overall study progress, site contract status, site IP release package status, regulatory submissions and approvals, and other aspects of their studies on demand.

Mitigate risk

Risk-based monitoring/management challenges are escalating as clinical trials become more global and complex, and as market pressures keep rising for new therapies at an ever-increasing pace. Analyze Insight provides visually rich analytics and dashboards helping your team transition from a process that is reactive to one that is proactive. Keep your studies on course and within budget by tracking critical cycle-time metrics and conducting real-time assessments of concurrent studies with multiple CROs. Understand where to focus discussions with CROs to support at-risk regions or sites.

Be proactive

Sponsors often have multiple studies running concurrently with several CROs, complicating oversight. Using Analyze Insight, sponsors have operational transparency and a single source of truth allowing them to benchmark performance of CRO partners. With Analyze Insight, sponsors can review their studies across different study dimensions, significantly improving proactive planning for future studies. Analyze Insight is a unique and revolutionary solution that is transforming today's study planning activities.

“As evidence that more study startup oversight is needed, it can take an estimated eight months to move from pre-visit through site initiation. For sponsors, improving oversight of this function means real-time visibility into study startup progress, affording greater confidence in the reports they receive from the CROs involved in studies across the portfolio.”
