- Real-time access to critical operational data
- Visibility into business information directly from JD Edwards applications
- Single reporting solution for all JD Edwards modules and custom applications
- Embedded administration and management of reports

Figure 1. One View Sales Order Management

The JD Edwards EnterpriseOne reporting capabilities are designed to deliver personalized access to information critical to your business processes. One View Reporting is all about delivering the right data to the right person, right now. Clear and concise views over operational activities lead to more effective decision making and improved productivity. One View Reporting's intuitive interface empowers end users with the flexibility to create personalized transactional reports without the need for IT assistance.

One View Reporting for Sales Order Management

With One View Sales Order Management, improve insight across your sales

ORACLE

transactions to enhance real-time decision making, improve customer relationships, and decrease the cost of reporting. Users have the choice and flexibility of reporting on their open sales orders, historical sales orders, or both. Item and customer categories and other sales information provide users multiple ways to view their sales transactions for reporting and comparison purposes.

Customer managers, sales managers, pricing managers, and other division leaders can accurately assess the health of their business with their customers at any point in time, analyze sales trends, and plan accordingly. Managers can know what items sell the most, who their top customers are, and seasonal buying trends by region, territory, business unit, and so on. Managers can compare pricing for customers, items, regions, and more.

One View Sales Order Management delivers a set of high-value reports to help end users design, create, run, and share reports. The wealth of data is extremely flexible in the types of reports that can be created for sales transactions and base pricing records. Reports provide real-time access to operational data that users can view as lists, charts, and graphs and drill down to the level of detail required to make informed business decisions.

JD Edwards EnterpriseOne One View Reporting

JD Edwards EnterpriseOne One View Reporting enables end users to access data from simple to sophisticated reports using JD Edwards EnterpriseOne interactive applications with Oracle BI Publisher layout reporting and distribution features. One View Applications combine essential transaction data and master data, including associated descriptions and category codes, previously not available. Users can view data in the exact layout they want using all the advanced capabilities of Oracle BI Publisher. One View Reporting provides a large library of predefined reports designed to answer the most common business questions. Delivered reports can be personalized by end users as needed and additional reports can be defined without IT support. The complexity of data models, table joins, and business views are masked from the end user to ensure intuitive reporting experiences. One View Reporting provides users a simplified and clear view of the essential data necessary to effectively execute business processes.
The power of One View Reporting comes from the extensive number of applications, reports, and report components. These solutions address the most common and highly demanded business questions, enabling you to realize value from day one.
