

Analyze

Leveraging business intelligence

Communication and transparency are required to move a clinical trial forward efficiently, but how can you do this when you're working with multiple external partners all using different systems with inconsistent reporting conventions?

Get instant, reliable metrics

Manually prepared data is often too old to accurately represent the current status. Readily proving you're on track can be an ongoing challenge. Where are the bottlenecks?

Oracle Health Sciences Analyze Cloud Service (Analyze) allows you to:

- Provide real-time access to a wealth of data across your study portfolio
- Replace the need for manual preparation of routine reports
- Eliminate time wasted on non-productive activities, such as status meetings

Use flexible reporting to meet your needs

Standardized reports often lack the flexibility required to address the diverse needs of your globally dispersed and outsourced clinical research teams.

With Analyze, you can tailor your analytics to your needs by:

- Interacting with your data and running ad-hoc reports
- Growing your customized library of reports for reuse in published updates
- Developing reporting needs in a structured environment

“Analyze empowers our visibility into the traditionally cumbersome process of activating investigate sites for clinical trials. Capturing robust clinical and operational data allows us to enhance our predictability model for forecasting.”

CAROL ALIYAR
EXECUTIVE VICE PRESIDENT,
STUDY START-UP
SYNEOS HEALTH

Analyze is the only solution that provides sponsors, CROs, and sites access to the same information in a secure and controlled manner, ensuring everyone is on the same page at all times.

Mitigate risk

Risk-based monitoring/management challenges are escalating as clinical trials become more global and complex, and as market pressures keep rising for new therapies at an ever-increasing pace.

Analyze, allows you to:

- Keep studies on course and within budget by tracking critical cycle-time metrics
- Understand where to focus resources to support at-risk regions or sites
- Conduct real-time assessments of concurrent studies with multiple partners

Gain operational insights and transparency

Sponsors often have multiple studies running concurrently with several CROs, complicating oversight. Reconciling data across multiple CROs with different reporting formats can make timely oversight difficult.

Using Analyze, you have a single source of truth—one platform used by everyone involved in study startup, which:

- Benchmarks the operational rollout of your studies or teams
- Facilitate real-time communications with CROs on study progress
- Improves operational efficiency and strengthens relationships

BETTER TOGETHER

Gain insights with real-time status updates across all your studies and a common view shared by all involved. Visually rich analytics and dashboards help transition your team from a process that is reactive to one that is proactive.
